(a) Radiation entropy grows linearly (no Page turnover)
S(interior) = Nln 2 (maximally entangled pairs)
maximally entangled pairs (θ = π/4)
weakly entangled pairs (θ = 0.3)
S(R_k) [nats]
number of emitted quanta k
(b) Correlation with the interior partners
maximally entangled pairs (θ = π/4)
weakly entangled pairs (θ = 0.3)
I(R_k : interior) [nats]
number of emitted quanta k
