(a) Radiation entropy
unitary: ±1 s.d. over seeds
unitary: S(R), mean of 24 seeds
exact Haar average (Page)
non-unitary: S(R) = kln 2
S(R) [nats]
emission step k
(b) Global state: pure vs mixed
non-unitary: S(BH)
non-unitary: S(R,BH)
unitary: S(R,BH) = 0
non-unitary: purity of global state
emission step k
(c) Correlations radiation / black hole
unitary: I(R:BH) = 2S(R)
non-unitary: I = 0 (no correlations)
mutual information [nats]
emission step k
