(a) Generalized entropy vs boundary position
τ = 0.300
τ = 0.550
τ = 0.620
τ = 0.800
$S_{gen}(u;\tau)$
island boundary position u
(b) Page transition
no island (Hawking-like, grows)
island extremum
minimum (island formula)
S(radiation)
τ_P = 0.620
evaporation time τ
(c) Radiation entropy tracks the shrinking BH after the transition
$S_H(\tau)$ (black hole)
S(radiation)
τ
